

Root Pruning – Self Assessment

Palm Beach County Cooperative Extension Service
University of Florida / IFAS

Module #7 Assessment Questions

1. Root pruning should be considered for all of the following reasons except?
 - A) Reduces the rootball size when transplanting
 - B) Addresses any conflicts with hardscape
 - C) Corrects defects at time of installation
 - D) Allows for the possibility to install small shrubs close to the trunk of a tree
2. Root pruning is beneficial for the regeneration of circling roots.
 - True
 - False
3. Some defects that can be addressed with root pruning are:
 - A) Roots that are spreading out from the trunk
 - B) Excess soil on the top of the rootball
 - C) Matted roots that are deflected downward
 - D) Both B and C
4. Root pruning should allow for the removal of at least 50% of the root massing.
 - True
 - False

This module, a part of the Strengthening our Community Tree Canopy Through Education, was made possible by a grant through the 2011 National Urban and Community Forestry Grant Program, the Florida Department of Agriculture and Consumer Services, and the Florida Forest Service.
